Summary

I am a first year undergraduate college student majoring in Data Science. I have experience in code design and an interest in analyzing data and applying statistical methods in a science related field.

Education

- I am currently enrolled in an undergraduate degree program at Oregon State University and am majoring in Data Science. I expect to graduate by June of 2032.
- GED (99th percentile in Science and Math).
- 3.5 years of High School with a weighted GPA of 3.875. Relevant courses:
    - AP Statistics.
    - AP Calculus AB.
    - AP Computer Science Principles - 5/5 on the exam.
    - Web Design 1.

Experience

- I have been programming for fun in my free time since I was 6 years old and programming in JavaScript for the past 9 years.
    - Designed and coded a tool for creating diagrams of molecules, demonstrating an ability to design a tool with graphics and successfully program it.
    - I have been making GitHub repositories for my projects for the past 5 years.
- I have collaborated on complex projects for fun.
    - I have collaborated on designing a complicated factory in the videogame Factorio. This involves partitioning tasks, teamwork, and negotiation of disputes.
    - Playing Factorio also involved designing and optimizing individual factories and handling complex logistics, which demonstrated critical thinking and long-term planning skills.
- I did a project for fun where I made and optimized an algorithm to solve the online word game Wordle. I ran simulations of the algorithm and recorded and analyzed performance data to optimize it.

    - Determining what changes may improve the algorithm demonstrated critical thinking.
    - I practiced and applied statistical analysis methods I learned in AP Statistics.

Skills

- Programming in JavaScript and TypeScript.
- Designing programs.
- Some HTML and CSS.
- Familiarity with GitHub and Visual Studio Code.
- Critical thinking.
- Planning ahead by creating a framework which can flexibly be expanded on.
